Environment Policy

We believe in creating a sustainable environment for us and those who follow

We are a focused and successful international distribution and services group with operations across the Americas, Europe, Asia Pacific, the UK and Ireland.

We support businesses all over the world with a variety of products that are essential for our customers in the successful operations of their businesses.

In Asia Pacific, our businesses operate across the Healthcare, Cleaning & Hygiene, Food Service, Safety and Emergency Services sectors, with over 45 locations throughout Australia, New Zealand, Singapore, and mainland China.

We recognise that the sourcing, consolidation, distribution and use of the products and services we provide requires natural resources and can create emissions and waste.

We aim to minimise impact from our entire value chain – in areas within our own operations as well as through the products we responsibly source and supply to our customers. We also recognise the important part our suppliers and customers play and so we partner with them to work towards having a more positive impact on the environment

We will achieve this by:

- Setting performance standards for our operations that address environmental risk.

- Being compliant with applicable environmental laws, regulations and other obligations.

- Putting measures in place to prevent pollution.

- Maximising resource efficiency and minimising carbon emissions.

- Embracing the circular economy model to reduce waste.

- Monitoring our performance and setting measurable and targets to drive continuous improvement.

- Providing effective resources and training to enable our employees to operate in a proactive environmental management manner.

- Auditing suppliers to ensure they meet social accountability, human rights, raw materials and manufacturing process legal requirements relevant to our product range.
